

## **V-FACTORS OF HERITAGE HORSES AND THEIR GENETICS IN CHRONOLOGICAL ORDER OF REGISTRY**

This list includes the first 20 years of horses registered in the MFTHBA in the order in which they entered the registry. Each horse has been factored to evaluate the amount of Tennessee Walking Horse in their genetic make up. To convert this factor number to a fraction, simply divide it by 16. That will tell you how many 16<sup>th</sup> TWH a horse is. A full blood TWH is factored at V-256. All horses that carry no TWH are factored at V-0. Half TWH is V-128.

Also included is the color of each horse if known and the year it was registered. It is very clear to see that the TWH did NOT play a significant roll in the development of the early Missouri Foxtrotter. It is also abundantly clear that the primary group upon which the breed was originally based was the Saddlehorse. This list also clearly indicates that the foundation of the breed was far smaller than imagined at the time of the closing of the books.

Excluding geldings and non-producing horses that carried TWH blood, the TWH made up less than 10% of the total horses of the registry up through 1968. There were 31 purebred TWH brought into the breed that were of producing age and ability however most did not produce registered foals. There were 368 purebred Saddlehorses during that same time frame.

This study is being made available for the express purpose of illustrating the real facts as to how the Missouri Foxtrotter was formed as a breed. All information was obtained with permission from the MFTHBA records and or online database, any discrepancies or inaccuracies are the result of MFTHBA records. This study is copyright protected. Distributing, copying, selling, or publishing this study without written permission from the FFHA is strictly prohibited.
